# Who should attend?

## Program Overview:

A dynamic business environment with aggressive competition is the norm in today's business world. An optimized supply chain can be the sustained competitive advantage that will enhance speed to market, waste reduction, cost efficiency, and bottom line performance.

This training program covers the lean concepts, tools, and applications, and focuses on how to apply them to the supply chain in order to solve real world operational challenges and in so doing to strengthen competitive advantage. Process and value stream mapping techniques, project structuring, activity based costing, and supply chain sustainability are examples of the breadth of topics to be covered in this three day course.

Traditional supply chain cost structures will be assessed. Cost optimization simulations will be run, and a thorough understanding of linear programming will be developed. Two case studies will be reviewed.

## Skills You'll acquire:

Participants will learn the traditional view of supply chain cost structures and the sharp contrasting view of supply chain under a lean approach. They will develop a thorough understanding of linear programming and cost optimization in Excel. Process mapping and value stream mapping will be learned through working examples and case study work. Sustainable supply chain concepts including carbon footprint and reverse logistics will also be studied.

## Who should attend:

This course is designed for those who have influence on supply chain strategy. It is ideal for business leaders and project team members who are chartered with developing recommendations concerning future supply chain and logistics networks. It is of benefit to anyone who wishes to learn about the concepts of lean, costing, mapping, optimization, and project structuring, and the potential benefits which they can provide to an organization's supply chain structure.

## Format:

This is a instructor-led, 3-day eight hour workshop conducted in a highly interactive & hands-on learning environment.

## Cost:

Contact us for more information about the cost structure.

## Trainer Pool:

Trainers include expert practitioners from industry and our experienced Consulting Team. We conduct initial assessments at the client site to understand the as-is business processes and IT Infrastructure in place to support on-going operations.

Our assessment team also gathers training requirements aligned to clients' custom needs.
